

---

## Access to Images and Charts

---

### Important

The necessary credentials to access the repositories can be obtained upon request.

### Example of pulling a Docker image from the repository

```
export USERNAME=  
export PASSWORD=  
export URL_DOCKER_REGISTRY=  
export IMAGE=  
docker login $URL_DOCKER_REGISTRY --username $USERNAME --password $PASSWORD  
docker pull $IMAGE
```

### Example of pulling a Helm chart from the repository

```
export URL_CHART_REGISTRY=  
export CHART_NAME=  
export CHART_VERSION=  
helm repo add predicate $URL_CHART_REGISTRY --username $USERNAME --password  
$PASSWORD  
helm repo update  
helm search repo $CHART_NAME -l --devel  
helm pull predicate --version $CHART_VERSION
```

### Important

To successfully pull images in the cluster, it is necessary to create a secret `type: kubernetes.io/dockerconfigjson` with the name `regcred` in the required namespace.
